Code	JOB_UC_01.0
Use case	Register Jobseeker Account
Actor	New User
Goal	To allow a new user create an account with JOB_SEEKER role with Joblify platform.
Description	
This use case describes how a new Jobseeker registers an account in the Joblify App by entering the following personal attributes: 1. Type of User: The user selects the type of user they are: Jobseeker or Company representative 2. First Name: The user's first name 3. Last Name: The user's last name 4. Email: The user's email address 5. Phone Number: The user's 10-digit mobile phone number 6. Password: A secure password that meets system security requirements 7. Confirm Password: A user re-enters their password for confirmation 8. Checkbox: The user agrees to terms and conditions of the platform by ticking this checkbox. Once the user enters these details, the system validates the input and creates a new user account, enabling them to login.	
<i>Change request 1</i>	

Validation Rules

- ✓ Users must be new meaning no duplicate email or phone number in the database
- ✓ All fields must be filled before saving including the agreement to the conditions.
- ✓ Phone numbers must be numeric and exactly 10 digits.
- ✓ Email addresses must be in a valid email format, include company emails.
- ✓ Passwords must be minimum 8 characters, including numbers and letters

Change Request 1

Steps

- The user navigates to the Register page.
- User selects Account Type as Jobseeker.
- Enters required information.
- Clicks the Register button.
- The system validates the input data.
 - If validation passes,
 - ✓ User is redirected to the login screen with type of user field indicated.
 - If validation fails, the system shows relevant error messages and prompts the user to correct the input, staying on the registration page.

Change request 1

Notable system permissions
Any new visitor to the system can register for an account.

Code	JOB_UC_01.1
Use case	Register Company Account
Actor	New User (a representative of the company)
Goal	To allow a company representative, such as HR or any other, create the company's account on the Joblify platform.
Description	
This use case outlines the steps for a company to create an account on the Joblify platform. The company representative provides essential details such as: 1. Type of User: The user selects the type of user they are, here, Company 2. Company Name: The name of the company 3. Email: The email for the company	

4. Password: The company account password
5. Confirm Password: Representative re-enters the password for confirmation.
6. Industry: The type of industry the company operates in, such as, Hospitality, Software, etc.
7. Contact Person Name: The company representative
8. Phone: For the company or the company representative
9. Address: Physical location for the company
10. Size: Number of employees in the company
11. Establishment Year: When the company was established.
12. Description: Some brief about the company.
13. ~~Representative Details:~~
 - ~~○ Full Name: The name of the representative~~
 - ~~○ Position: The position of the representative at the company~~
 - ~~○ Contact Info: such as phone number or email~~
14. Online Presence (optional): links to website or LinkedIn.
15. Company Logo (optional): Uploads company logo
16. Checkbox: The representative agrees to terms and conditions of the platform by ticking this checkbox.

Once the company enters these details, the system validates the input and creates a new user account, of type Company, enabling them to login.

Change request 1

Validation Rules

- ✓ The company must be new meaning no duplicate email or phone number in the database
- ✓ All fields must be filled before saving including the agreement to the conditions.
- ✓ Company Name is required and must be unique or reviewed for duplicates
- ✓ Contact person name and role are mandatory.
- ✓ Phone numbers must be numeric and exactly 10 digits.
- ✓ Email addresses must be in a valid email format.

- ✓ Passwords must be minimum 8 characters, including numbers and letters

Change Request 1

Steps

- The company representative accesses the registration form.
- Selects Account Type as Company.
- Enters the following information:
 - Account Credentials: Email, Password, Confirm Password
 - Company Information: Name, Industry, Description, Size, Establishment Year
 - Contact Information: Phone, Email, Address
 - Representative Details: Full Name, Position, Contact Info
 - Online Presence (optional): Website, LinkedIn.
 - Uploads company logo (optional)
- Agrees to terms and conditions and privacy policy
- Clicks “Register”.
- The system validates the input data.
 - If validation passes,
 - ✓ System stores company and representative data.
 - ✓ System sends a verification email to the user.
 - ✓ User clicks the verification link.
 - ✓ System marks the account as verified and redirects to login.
 - If validation fails, the system shows relevant error messages and prompts the user to correct the input, staying on the registration page.

<i>Change request 1</i>
Notable system permissions
• This functionality is only available to unauthorized users. • Only verified users can proceed to the company dashboard.

Code	JOB_UC_02.0
Use case	User Login
Actor	Registered User
Goal	To allow a registered user (Company or Jobseeker) to log into the Joblify platform.
Description	
This use case describes how a registered user logs into Joblify App by entering the following login credentials: • Email: The email address that was used during registration. • Password: The secure password associated with the account. • Remember Me: The user accepts login details to be kept in memory for the session. • Additionally, if user type is Company: ○ Representative Details: ✓ Phone After entering the credentials, the system validates them and grants access to the system if valid. Otherwise, the system throws a message indicating the details are wrong or non-existent.	
Change request 1	

Validation Rules

- ✓ Email address must be in a valid format and exist in the system.
- ✓ Password must match the email address.
- ✓ Remember Me may or may not be ticked
- ✓ Both fields, email and password, must be filled before attempting to log in.

Change Request 1

Steps

1. The user navigates to the **Login** page.
2. Enters the **Email** and **Password**.
3. Optionally ticks the Remember Me checkbox.
4. Clicks the **Sign In/ Login** button.
5. The system verifies the provided credentials: If the credentials are valid, and:
 - User is a Jobseeker, routes to the Jobseeker's personal dashboard.
 - User is a Company, routes to the Company's dashboard.If the credentials are invalid, the system displays an error message and prompts the user to retry.

Change request 1

Notable system permissions

Only registered users can access the main functionalities of the system after a successful login.

Code	JOB_UC_03.0
Use case	Job Seeker Dashboard Actions
Actor	Registered Jobseeker
Goal	To allow a registered Jobseeker access some of the actions they can perform on the Joblify platform.
Description	
This use case describes what actions authorized Jobseekers can perform on their dashboards. These include: 1. Create/Update Jobseeker Profile: Add or update personal and professional information. 2. View Companies: Search for and explore companies registered on the platform. 3. View Job posts: Browse and search active job posts.	
Change request 1	

Validation Rules

- ✓ Only users with the JOB_SEEKER role and appropriate permissions can access the Jobseeker Dashboard.
- ✓ The dashboard provides three primary action options:
 - Profile Management
 - Company Listings
 - Job Listings

Change Request 1

Steps

1. The Jobseeker logs into the system with valid credentials and permissions.
2. The system detects their role and routes them to the Jobseekers Dashboard
3. On the dashboard:
 - The Jobseeker clicks on one of the action buttons or cards
 - The system routes them to the appropriate screen to perform the selected action.

Change request 1

Notable system permissions

Only users with the JOB_SEEKER are allowed to access and interact with the Jobseeker Dashboard .

<i>Change request 1</i>
Mockup Screens
• Dashboard Overview Page ○ Cards or buttons: “Update Profile”, “View Companies”, “View Jobs” • Navigation to Specific Actions ○ Profile Form Page ○ Company Listing Page ○ Job Listing Page
<i>Change request 1</i>

Use case code	<u>JOB UC 03.0</u>
Test case	JobseekerDashboardActions_01
Scenario/Description	
A Jobseeker attempts to log in and is redirected to their dashboard, where they can view and interact with three main actions: Create/Update Profile, View Companies, and View Job Posts.	
Test Data 1	
A Jobseeker clicks on one of the buttons or cards	
Expected behavior	
The system should allow the Jobseeker to:	

• View the dashboard • See clearly labeled buttons/cards for available actions • Navigate to the respective pages when an action is selected.

Code	JOB_UC_o4.o
Use case	Company Dashboard Actions
Actor	Registered Company
Goal	To allow a registered company access some of the actions it can perform on the Joblify platform.
Description	
This use case describes what actions authorized Companies can perform on their dashboard. These include: 1. Create/Update Company Profile: Maintain accurate company information and	

2. **Post a Job:** Create new job listing to attract candidates
3. **View Applicants/ Subscribers:** View and manage Jobseekers who have applied for posted jobs
4. **View Jobseekers' Profiles:** View Jobseekers' profiles registered on the system and select desired ones for virtual internship or a posted job.
5. **Create Virtual Intern (VI) Chat Area:** Create chat area to communicate with virtual interns.

Change request 1

Validation Rules

- ✓ Only users with COMPANY role and appropriate permissions can access the Company Dashboard.
- ✓ **The Dashboard displays the following core options:**
 - Company Profile Management
 - Job Posting
 - Applicants Management
 - View Jobseekers
 - Create VI chat area

Change Request 1

Steps

1. The Company logs into the system using authorized credentials.
2. The system routes them to the Company Dashboard
3. From the Dashboard
 - The Company selects an action (e.g. Post Job)
 - The system routes them to the relevant page to perform that action.

<i>Change request 1</i>	
Notable system permissions	
Only users with COMPANY role can access and interact with the Company Dashboard.	
<i>Change request 1</i>

Code	JOB_UC_05.0
Use case	Create/Update Jobseeker Profile
Actor	Registered Jobseeker
Goal	To allow a registered jobseeker to create or update their profile.

Description

This use case describes how a registered Jobseeker creates or updates their personal profile, which is essential for visibility to employers and participating in virtual internships. The Jobseeker chooses a Profile Type (e.g. EMPLOYABLE or VIRTUAL INTERN), profile visibility (e.g PUBLIC or PRIVATE), uploads a profile picture, and fills in additional relevant information. Key profile data includes:

1. **Profile Type:** EMPLOYABLE or VI (Virtual Intern)
2. **Profile Visibility:** PUBLIC (PREMIUM) or PRIVATE (FREEMIUM & Default)
3. **Profile Pic:** Upload an image (optional but recommended)
4. **Personal Bio:** Brief summary about self
5. **Skills:** Select or enter skills relevant to the job market
6. **Education History:** Academic background
7. **Work Experience:** Past internships or jobs (optional for VI)
8. **Certifications or Portfolios (optional)**
9. **Contact Info Update (phone or address – optional)**

Change request 1

Validation Rules

- ✓ Only registered and authenticated users with JOB_SEEKER role can access this feature.
- ✓ Profile type is required
- ✓ Skills must be at least one (for EMPLOYABLE type)
- ✓ Profile Image must be a valid image file if provided
- ✓ Education and Bio are required
- ✓ Work experience is optional for VI

Change Request 1

Steps

1. Jobseeker logs in to Joblify
2. Is routed to the Jobseeker Dashboard
3. Clicks action, “Create/Update Profile”
4. Fills in:
 - Profile Type: EMPLOYABLE or VI
 - Uploads profile picture
 - Enters personal Bio
 - Selects/ enters skills
 - Adds education details
 - Optionally adds work experience
 - Optionally uploads certifications of portfolio
5. Clicks “Save” or “Update”
6. System validates input.
7. If valid, profile is saved and confirmation message is shown
8. User is redirected to profile view or dashboard.

Change request 1

Notable system permissions

- Only registered and authorized users with JOB_SEEKER role can access and update their profiles.
- System restricts profile creation if user has not verified their email.

<i>Change request 1</i>
Mockup Screens
1. Jobseeker Dashboard with “Profile” button/ card 2. Create/ Edit Profile Form 3. Confirmation Screen
<i>Change request 1</i>

Use case code	<u>JOB UC 05.0</u>
Test case	JobseekerProfileUpdateTestCase_01
Scenario/Description	
A Jobseeker creates/ updates an EMPLOYABLE profile with full details.	
Test Data 1	
○ Name: John Doe ○ Profile Type: EMPLOYABLE ○ Skills: Java, SQL, Teamwork ○ Education: BSc in Computer Science ○ Experience: Internship at CodeLab. ○ Bio: Passionate about backend development.	
Expected behavior	
• System validates all required fields and file formats	

• System saves or updates the jobseeker’s profile data in the database • System displays a success confirmation message: “Profile updated successfully” • User is redirected to the dashboard or jobseeker profile view.
Actual behavior
Status
Draft
Comments
• Test with missing optional fields (e.g. logo, website) to confirm correct handling • Confirm only users with JOB_SEEKER role can access this route/ endpoint • Include tests for invalid file upload or missing required fields.

Code	JOB_UC_05.1
Use case	Create/Update Company Profile
Actor	Registered Company
Goal	To allow a registered company to create or update its organizational profile.
Description	
This use case describes how a registered company can create or update its profile on the Joblify platform. The company profile enables visibility to jobseekers and supports job posting credibility. Information to be include in the company profile:	

10. **Company Name**
11. **Industry/Sector**
12. **Company Size (e.g. 1-10, 11-50, etc.)**
13. **Year Established**
14. **Company Description**
15. **Company Logo (optional upload)**
16. **Phone Number and official email**
17. **Physical Address**
18. **Website and/ or LinkedIn (optional)**
19. **Representative contact info (Name and Phone/Email)**

Change request 1

Validation Rules

- ✓ Only authorized users with the COMPANY role and appropriate permissions can access this feature.
- ✓ Company Name and industry/sector are required
- ✓ Email must be a valid email
- ✓ If logo is provided, it must be a valid image file
- ✓ Website/ LinkedIn must be valid URLs if entered.

Change Request 1

Steps

<i>Change request 1</i>
Notable system permissions
○ Only registered and authenticated company users can access this profile management feature. ○ Companies must complete their profile before posting jobs. ○ Only one profile per company account is allowed
<i>Change request 1</i>
Mockup Screens
<i>Change request 1</i>

Use case code	<u>JOB UC 05.1</u>
Test case	CompanyProfileUpdateTestCase_01
Scenario/Description	
A Company user logs in, lands on the dashboard, and selects the profile creation/update action. The user fills in the profile form with valid data and submits it. The system validates and saves the data, then confirms successful update.	

Test Data 1
- Company Name: Iona Tech - Industry: Tech - Company Size: 1-10 employees - Established: 2025 - Company Description: Providing Innovative solutions for emergent local and international challenges. - Phone Number: 0722223344 - Email: info@ionatech.io - Address: 123 Lukuni Avenue - Website: https://www.ionatech.io - LinkedIn: https://linkedin.com/company/ionatech - Contact Person: Abigail Mulungi (HR Manager) - Company Logo: ionatect_logo.png
Expected behavior
- System validates all required fields and file formats - System saves or updates the company profile data in the database - System displays a success confirmation message: “Profile updated successfully” - User is redirected to the dashboard or company profile view.
Actual behavior
Status
Draft
Comments
- Ensure all URL fields are optional but validated if provided - Test with missing optional fields (e.g. logo, website) to confirm correct handling - Confirm only users with COMPANY role can access this route/ endpoint - Include tests for invalid file upload or missing required fields.

Code	JOB_UC_o6.o
Use case	View Companies
Actor	Registered Jobseeker
Goal	To allow a registered Jobseeker view and search for companies on the Joblify platform.
Description	
This use case enables a Jobseeker to explore all registered companies on the platform. The Jobseeker can view brief summaries of each company and search or filter companies by industry, size, location, or keyword. Clicking on a company can lead to a more detailed view of its profile and job listings.	
<i>Change request 1</i>	
Validation Rules	
• Only authenticated Jobseeker users can access this feature • Search queries must not be empty or malicious (e.g. script tags) • Filters (industry, size, location) must match valid Enum values.	
<i>Change Request 1</i>	

Steps

1. Jobseeker logs into Joblify
2. Is routed to the Jobseeker Dashboard.
3. Clicks “View Companies”
4. System loads a paginated list of companies with summary info (e.g. name, industry, logo).
5. User can:
 - Scroll through the list
 - Use search bar to enter company name or keywords
 - Filter by industry, company size, or location.
6. User clicks on a company card to view full profile and current job openings.
7. System redirects to company detail view.
8. User can subscribe/ apply to company of choice as either EMPLOYABLE or VIRTUAL_INTERN

Change request 1

Notable system permissions

- Only users with JOB_SEEKER role and verified accounts can access this endpoint.
- Company information returned is public or approved for display by the company.
- Unverified or suspended companies do not appear in the list.

Change request 1

Mockup Screens

- Jobseeker Dashboard with “View Companies” button/ card
- Paginated list/grid of companies

• Filter/ search bar UI • Company detail view
<i>Change request 1</i>

Use case code	JOB UC 06.0
Test case	ViewCompaniesTestCase_01
Scenario/Description	
A Jobseeker logs in, accesses the “View Companies” feature, and views all listed companies. Performs a search by industry and clicks on a company to view its full profile.	
Test Data 1	
• Search keyword: “Iona” • Filter: Industry = “Tech” • Expected Result: List contains “Iona Tech” company.	
Expected behavior	
• System successfully displays list of registered and approved companies. • System filters companies correctly when using search and filter inputs. • System presents a grid of company cards with brief info (e.g. name, industry, logo, size) • Clicking on a company leads to a profile view with relevant info and job listings.	
Actual behavior	
Status	
Draft	

Comments
• Add pagination and loading indicators for large datasets. • Consider adding favorite/save feature in future iterations • Validate filter options and enforce limits on search input length.

Code	JOB_UC_07.0
Use case	Subscribe or Apply to a Company
Actor	Registered Jobseeker
Goal	To allow a Jobseeker to subscribe/apply to a company either as EMPLOYABLE or VIRTUAL_INTERN.
Description	
This use case describes the ability of a registered Jobseeker to express interest or subscribe to a company they view by applying as either: • An employable candidate (interested in full-time/ part-time jobs), or • A Virtual Intern candidate (interested in internships or learning programs). The system guides the user to create or update a specific profile (Employable profile or VI profile) depending on their selection.	
Change request 1	

Validation Rules

- User must be a registered and authenticated Jobseeker.
- User must not have already subscribed to the selected company in the same category.
- User must complete the relevant profile (EMPLOYABLE or VI) if not already existent before finalizing subscription.
- Subscription type must be either EMPLOYABLE or VIRTUAL_INTERN (Enum validation).
- Duplicate subscriptions/ applications must be prevented.
- The company must be active.

Change Request 1

Steps

1. Jobseeker logs in and navigates to the company list.
2. Clicks on a company card to view its detailed profile.
3. On the profile page, a “Subscribe/Apply to Company” option is displayed
4. Jobseeker clicks on the button and is prompted to:
 - Choose subscription type: EMPLOYABLE or VIRTUAL_INTERN
5. System checks if the user already has a corresponding profile:
 - If no profile, user is routed to a create profile form
 - If profile exists, system skips to the next step.
6. Upon submission, system:
 - Validates profile data (if newly created)
 - Saves the subscription entry linking user, company, and subscription type
7. System confirms success: ***“You have successfully subscribed to [CompanyName] as [Type].”***
8. **Subscription appears in the user’s dashboard under “My Subscriptions” and the company dashboard under “Interested Employees” or “Interested Virtual Interns”**

Change request 1

Notable system permissions

- Only users with the JOB_SEEKER role can perform this action.
- System must log the interaction in the company's dashboard for later review.
- Companies must have an active profile and be visible on the platform to accept subscriptions.
- Subscription must be linked to the Jobseeker and company for tracking purposes.

Change request 1

Mockup Screens

- Company Profile View with "Apply as ...".
- Popup or screen for selecting subscription type.
- Profile creation form (conditional: only if given profile type as subscription type is not existing).
- Confirmation screen or modal or alert.
- Company dashboard area showing a list of interested jobseekers and type of subscriptions (EMPLOYABLE or VIRTUAL INTERN) and Jobseeker's Dashboard indicating the new subscription among "My Subscriptions".

Change request 1

Use case code	<u>JOB UC 07.0</u>
Test case	SubscribeToCompanyTestCase_01
Scenario/Description	
A Jobseeker visits a company profile page and chooses to apply as a VIRTUAL_INTERN. The system prompts them to create the VI profile (if not already created), validates their status, and completes the subscription.	
Test Data 1	
• Jobseeker Name: John Ssemwanga • Company Name: TechBridge Africa • Subscription Type: VIRTUAL_INTERN • VI Profile Data: ○ Career Interest: Digital Marketing ○ Availability: 10 hrs./ week. ○ Learning Goal: “Grow in hands-on digital campaigns”. • Company Status: Active	
Expected behavior	
• System routes user to create VI profile (if none exists) • System verifies the Jobseeker’s identity and role. • System checks for existing applications. • System saves the new subscription record. • A success message is displayed to the user. • The company dashboard reflects the new application under “Interested Interns” or “Interested Employees” • The user dashboard reflects the new application under “My Subscriptions”.	
Actual behavior	
Status	

Draft
Comments
• Ensure UX feedback (e.g. disable button after applying). • Prevent duplicate subscriptions (same user to same company with same type). • Could add analytics (e.g. number of subscriptions per company) – FUTURE. • May include unsubscribe/ revoke feature - FUTURE

Code	JOB_UC_o8.o
Use case	View Job Posts
Actor	Registered Jobseeker
Goal	To allow a registered Jobseeker to view and search all active job posts on the JOBLIFY platform.
Description	
This use case allows a Jobseeker to explore active job listings posted by companies on the platform. The user may search by job title, filter by industry, job type, location, or experience level, and view job details by clicking on a specific listing. It's a key feature of the Jobseeker experience, enabling them to find suitable roles.	
Change request 1	

Validation Rules

- Only authenticated Jobseekers can access this feature.
- Only jobs marked as “active” are displayed.
- Filter values (e.g. job type, location, industry) must match valid predefined Enums.
- Search query must be valid and non-empty (no SQL injection or script tags).

Change Request 1

Steps

1. Jobseeker logs in and is routed to their dashboard
2. Clicks on “View Job Posts”
3. System displays a list/ grid of active job postings with brief info:
 - Job Title
 - Company Name
 - Location
 - Salary range (if available)
 - Application deadline.
4. User uses:
 - Search input to find jobs by keyword/ title
 - Filter by: job type (full-time, part-time), industry, experience level, location
5. User selects a job post to view full details.
6. System displays full job description, requirements, company profile, and application option.

Change request 1

Notable system permissions	
- Only users with the JOB_SEEKER role and verified accounts can view jobs. - Job posts are returned only if: - The posting company is approved and on the platform. - The job post is active and within its valid posting date range.	
<i>Change request 1</i>	
Mockup Screens	
- Jobseeker Dashboard with “View Job Posts” button - Job postings grid/ list view - Filter/ search bar - Job Detail View.	
<i>Change request 1</i>	

Use case code	<u>JOB UC 08.0</u>
Test case	ViewJobPostsTestCase_01
Scenario/Description	
A Jobseeker logs in, navigates to the job post listings, filters by job type “internship” and industry “Tech,” and clicks on a job post to view its details.	
Test Data 1	

• Search Term: “Backend Developer” • Filter: ○ Job Type: Internship ○ Industry: Technology ○ Location: Kampala
Expected behavior
• System returns only active job posts matching the filters. • Clicking a post loads a detailed view (job post card or screen) • System ensures that the job is still open and the posting is valid. • If no jobs match, a “no results found” message is shown.
Actual behavior
Status
Draft
Comments
• Consider future enhancements: bookmark/ save job, apply directly from detail view. • Ensure expired posts do not appear. • Test edge cases: no jobs available, expired jobs, or invalid filter values.

Code	JOB_UC_o8.1
Use case	Apply to Job Post
Actor	Registered Jobseeker
Goal	To allow a Jobseeker to apply for an open job by uploading or creating a custom CV/ resume tailored for that job.
Description	

This use case describes how a Jobseeker applies to a specific job post listed on the JOBLIFY platform. When applying, the user has the option to:

- Upload an existing resume/ CV, or
- Create a custom resume/ CV directly on the platform (if they don't have one or want to tailor it to the specific job).

The system ensures only one application per job per user, and stores the resume/ CV with the application for later reference by the company.

Change request 1

Validation Rules

- Only authenticated Jobseekers can apply for jobs.
- User must upload a supported file type (PDF/ DOCX) or complete a resume creation form.
- User cannot apply multiple times to the same job.
- The job post must be active and within deadline.
- Resume/CV must meet file size and format constraints (e.g. max 5MB, .pdf/ .docx).

Change Request 1

Steps

1. Jobseeker logs in and views available job posts.
2. Selects a job and clicks "Apply Now"
3. System checks:
 - If user has already applied:
 - If yes, blocks and notifies user.
 - If deadline has passed:
 - If yes, blocks and notifies user.
4. System presents two options:
 - Upload CV/ resume
 - Create Resume (using a form with input fields like Education, Experience, Skills, Summary).
5. User uploads or completes the resume.
6. User clicks "Submit Application"
7. System:
 - Stores the application with linked job post, user, resume/ CV, and company.
 - Sends notification (or email) to both user and company.

8. User is shown a success message and redirected to their dashboard having a “My Applications” section if this is the first application made.
<i>Change request 1</i>
Notable system permissions
• Must be a verified user with the JOB_SEEKER role • Job post must be from a verified company and marked “open for application” or simply “open” • Application records are accessible only to the applicant and company that posted the job.
<i>Change request 1</i>
Mockup Screens
• Job Details View with “Apply Now” button • Upload/ Resume Options Modal • Resume Builder Form • Confirmation Screen
<i>Change request 1</i>

Use case code	JOB UC_08.1
Test case	JobPostApplicationTestCase_01
Scenario/Description	
A Jobseeker applies for a job post by creating a resume on-platform if they don’t already have or want a custom one tailored for the job. System prevents re-application.	
Test Data 1	
• Job Title: “Frontend Developer – Internship” • Company: Iona Tech Services • Resume Method: Create on-platform	

- Resume Fields: - Summary: “Passionate frontend dev with 1-year experience in React” - Education: “Bsc Computer Science – Makerere University” - Skills: “React, CSS, Git” - Experience: “Inter at TechHiver, UI updates for client dashboard”
Expected behavior
- System allows the user to create and submit resume - Application is recorded and linked to the job post - System blocks duplicate applications - Success message appears and entry is saved in “My Applications” on the jobseeker’s dashboard.
Actual behavior
Comments
- Consider allowing applicants to edit or withdraw applications – FUTURE - Integrate plagiarism check or keyword match for CV scoring- PREMIUM - Enable company to rate applications for easier sorting.

Code	JOB_UC_09.0 (PREMIUM)
Use case	Track Job Application
Actor	Registered Jobseeker (Premium Subscriber)
Goal	To allow a Jobseeker track the real-time status of their job application, including whether it has been viewed, shortlisted, rejected, or accepted by the hiring company.

Description

This use case allows premium Jobseekers to monitor the progress and status of each job application they submit on JOBLIFY. The feature offers visibility into:

- If it has been shortlisted or moved to interview
- If it has been rejected, marked as successful, or not yet.

This transparency helps jobseekers manage expectations and plan their job seeking efforts effectively.

Change request 1

Validation Rules

- The user must be a premium Jobseeker to access this application tracking feature.
- The job application must have been submitted through the JOBLIFY platform.
- The company must have a system status update (e.g. “viewed”, “under review”, etc.) logged for tracking to work.
- The user can only view statuses of their own applications.
-

Change Request 1

Steps

1. Jobseeker logs into their dashboard
2. Navigates to “My Applications Section”
3. Selected a submitted job application
4. The system displays a tracking panel with one of the following statuses:
 - 🕒 Not Viewed

-  Viewed
-  Shortlisted
-  Interview Scheduled
-  Rejected
-  Accepted

5. The Jobseeker is optionally shown a timeline of activity (e.g. “Viewed 2 days ago”).
6. Notifications or email updates may be sent when status changes occur (optional).

Change request 1

Notable system permissions

- Only users with JOB_SEEKER role and premium access flag can access this feature.
- Tracking data is only viewable to the applicant and not to other users.
- Companies must be able to update or trigger status changes through their own dashboard.

Change request 1

Mockup Screens

- Applications List: Each job card with status badge (e.g. “Viewed”, “Pending”)
- Application Detail View: shows detailed status history or timeline.
- Premium Only Banners: shown to non-premium users with option to upgrade.

Change request 1

Use case code	<u>JOB UC 09.0</u>
Test case	TrackJobApplicationTestCase_01
Scenario/Description	
A premium Jobseeker applies for a job, and later logs in to view the current status. System confirms if the employer has viewed the application.	
Test Data 1	
- User: Brian K. (Premium) - Job Post: Backend Developer – Iona Tech - Status: “Viewed”	
Expected behavior	
User logs in, sees “Viewed” status under his application. Timeline shows “Viewed 2 days ago”	
Actual behavior	
Status	
Draft	
Comments	
- Non-premium users should see a blurred tracking panel or an upgrade message instead. - Consider integrating notifications or analytics – FUTURE.	

Code	JOB_UC_10.0
Use case	View Jobseekers' Profiles
Actor	Registered Company
Goal	To allow a registered and logged-in company to view Jobseekers' public profiles, and from those, take further actions such as: • Invite Jobseekers to subscribe to their company as EMPLOYABLE or VIRTUAL INTERN (VI), or • Share job posts with preferred Jobseekers.
Description	
This use case allows authorized company users to access the Jobseekers' profiles on the JOBLIFY platform. Upon viewing a profile, companies may: • Invite the Jobseeker to subscribe to the company as EMPLOYABLE or VIRTUAL INTERN candidate. • Send a job post directly to the Jobseeker's inbox (if the post is active).	
Change request 1	
Validation Rules	
• Only registered and verified companies can access the Jobseeker profiles. • Companies must not access private profiles unless the Jobseeker has explicitly made them public or subscribed to the company. • Only active company accounts (not suspended or pending) can take actions on profiles. • Jobseeker must not have blocked the company from visibility - FUTURE	
Change Request 1	
Steps	
9. Company logs into JOBLIFY and navigates to its dashboard 10. Company clicks on "View Jobseeker" Profiles 11. Company searches or filters profiles by: • Skill • Location	

• Profile Type: EMPLOYABLE or VI • Experience level 12. Company views details of selected Jobseeker profile 13. From the profile view, the company can: • Click “Invite as EMPLOYABLE” • Click “Invite as VI” • Click “Share Job Post” (and select a job post to share) 14. The system: • Sends an invitation/ notification to the Jobseeker • Logs the interaction in the company’s activity history – FUTURE • Updates the Jobseeker’s inbox with the shared job (if applicable)	
Change request 1	
Notable system permissions	
• Actor must have role: COMPANY • Must be logged in and verified • Must be viewing profiles through official dashboard routes. • Additional actions (invite, share job posts) are enabled only if jobseeker profile is viewable and company has necessary permissions.	
Change request 1	
Mockup Screens	
• Jobseekers Listing Page with filter options • Jobseeker Profile Modal, Page or Card • Action buttons (Invite as EMPLOYABLE, Invite as VI, and Share Job Post) • Notification/ confirmation modal after an action	
Change request 1	

Use case code	JOB UC 10.0
---------------	-----------------------------

Test case	CompanyViewJobseekerProfilesTestCase_01
Scenario/Description	
a verified company logs in, routes to its dashboard, clicks on “View Jobseekers Profiles”, filters Jobseekers by skill, views a candidate’s profile, and invites them to subscribe as a VI.	
Test Data 1	
- Company name: GreenSpark Innovations - Jobseeker Name: Jane Achieng - Filter user: “Frontend Developer, Entry level” - Selected Action: Invite as VI	
Expected behavior	
- The system displays Jane’s profile - The invite is sent successfully - Jane receives a notification and the invitation is recorded.	
Actual behavior	
Status	
Draft	
Comments	
Enable bulk invite to multiple Jobseekers or auto-recommend based on job post - FUTURE	

Code	JOB_UC_10.1
Use case	Respond to Company Invitation
Actor	Registered Jobseeker

Goal	To allow a Jobseeker to view, accept, or decline invitations from companies requesting them to subscribe as either EMPLOYABLE or VIRTUAL INTERN (VI).
Description	
When a company views a Jobseeker's profile, it can send an invitation asking the Jobseeker to subscribe to their company. This use case covers how a Jobseeker receives and responds to such invitations. Responses can either: • Accept the invitation – which creates a subscription of the appropriate type (EMPLOYABLE or VI), or • Decline the invitation – which notifies the company and logs the decline in the system.	
<i>Change request 1</i>	
Validation Rules	
• Only logged in and verified Jobseekers can respond to invitations • Jobseeker can only respond to pending invitations • A Jobseeker cannot accept duplicate invitations from the same company for the same subscription type. • Jobseeker must have completed their base profile before accepting a subscription invitation (e.g. basic info, skills, resume (optional))	
<i>Change Request 1</i>	
Steps	
15. Jobseeker logs into the platform and navigates to their Notifications or Invitation Inbox. 16. The system displays a list of company invitations with: • Company name • Type of invitation (EMPLOYABLE or VI) • Date and optional message 17. Jobseeker selects an invitation and chooses: • Accept → system creates a new CompanySubscription entity (linked to jobseeker and company) with type EMPLOYABLE or VI • Decline → system marks the invitation as declined and notifies the company 18. The system updates the status of the invitation accordingly.	
<i>Change request 1</i>	

Notable system permissions
• Actor must have role: JOB_SEEKER • Must be logged in • Must have a valid, active account • Invitation must not be expired or previously responded to
<i>Change request 1</i>
Mockup Screens
• Invitations List View • Invitation Detail View with Accept/Decline options • Confirmation Modal • Optional: Message from company
<i>Change request 1</i>

Use case code	<u>JOB_UC_10.1</u>
Test case	RespondToCompanyInvitationTestCase_01
Scenario/Description	
A Jobseeker receives an invitation from a company to subscribe as EMPLOYABLE and accepts it.	
Test Data 1	
• Jobseeker: Daniel O. • Company: BlueEdge Medicals • Invitation Type: EMPLOYABLE • Action Taken: Accept	
Expected behavior	
• Daniel sees the invitation and accepts it • A new EMPLOYABLE subscription is created linking Daniel to BlueEdge Medicals	

• Company is notified • Status of invitation changes to “Accepted”
Actual behavior
Status
Draft
Comments
• Add auto-expiry of old invitations and ability for Jobseekers to block companies from sending further invites - FUTURE

Code	JOB_UC_11.0
Use case	Create Job Post
Actor	Registered Company
Goal	To allow a registered and verified company to create a new job post with the option of also creating a dedicated job-specific chat area. All applicants to the job post are automatically added to the chat area (if it exists).
Description	
This use case enables companied to publish job opportunities on the JOBLIFY platform. During creation, the company can choose to: • Provide detailed job requirements and description • Specify the job category, type (full-time, part-time, VI), and location • Set application deadline • Enable or skip chat area creation for that job If chat area is created: • Every applicant is automatically joined to that chat • The company can communicate with applicants collectively or individually	
Change request 1	

Validation Rules
- Only registered and verified companies can create job posts - Job post title, description, category, type, and deadline are mandatory fields - Job deadline must be a future date - If chat is enabled, only company staff (admin or HR roles) and applicants can participate. - Job post must be unique within the same company (no duplicate titles for active jobs).
Change Request 1
Steps
- Company logs into their dashboard and selects “Create Job Post” - The system displays the job post creation form with fields for: - Job title - Description - Category - Type (- Required skills or experience level - Application deadline - Optional toggle: “Create job specific chat area?” - Company fills the form and submits - The system: - Validates all fields - Saves the new job post - If “create chat area” clicked: - And company has no premium plan, prompts company for payment details - And company has premium plan, create chat area - Confirmation message is shown, and job post is listed under “Active Posts” - System sends notification to jobseekers based on job match criteria.
Change request 1
Notable system permissions
- Actor must have COMPANY role and CREATE_JOB_POST permission - Company must have an active profile - Must have a premium plan to create job chat area

Change request 1
Mockup Screens
• Job Post Creation Form (with optional chat toggle) • Job Post Summary Preview • Success page with share/copy link • Dashboard list of company's active job posts
Change request 1

Use case code	<u>JOB_UC_11.0</u>
Test case	CreateJobPostTestCase_01
Scenario/Description	
A verified company creates a job post title “Junior Backend Developer: and enables chat area.	
Test Data 1	
• Company: DevSoft Uganda • Job Title: Junior Backend Developer • Category: Software Development • Type: Full-time • Mode: Remote • Deadline: 30 July 2025 • Chat Enabled: Yes	
Expected behavior	
• Job post is successfully created and listed • A chat area specific to “Junior Backend Developer” is created. • All future applicants are added to the chat area automatically	
Actual behavior	

Status
Draft
Comments
• Allow attaching documents (e.g. job description PDF – Future) • Allow scheduling interviews directly from the chat area

Code	JOB_UC_11.1
Use case	Edit or Delete Job Posts
Actor	Registered Company
Goal	To allow a company to edit details of an existing job post or delete it entirely if it is no longer needed.
Description	
This use case enables companies to manage their previously created job posts. They can: • Edit job details (e.g. title, description, deadline) • Toggle job visibility (active/ inactive) • Delete a job post if it has not received applications, or it has been taken, or is no longer valid • If a post is deleted: ○ All associated chat threads (if any) are archived or deleted ○ Jobseekers who had applied are notified of the closure (optional) ○ If a job post has already received applications, deletion may be restricted or require confirmation.	
Change request 1	
Validation Rules	
• Only job posts created by the same company can be edited or deleted by it. • Only non-expired job posts can be edited.	

- A job post that already has active applications cannot be deleted unless a force-delete flag is set or company confirms.
- Title and deadline must remain valid when editing (e.g., future deadline, non-empty title)

Change Request 1

Steps

1. Company logs in and navigates to “My Job Posts”
2. Selects a job and clicks “Edit”
3. System displays a form pre-filled with the job’s data
4. Company updates fields (e.g., deadline, description, etc.)
5. Clicks “Save Changes”
6. System validates and updates the job post

Delete:

1. From the same view, company clicks “Delete”
2. System prompts a confirmation
3. If job has applications, system notifies the company of consequences
4. Upon confirmation, system:
 - Deletes job post (or marks it as inactive/ archived)
 - Unlinks any chat area and logs closure
 - Notifies applicants of the job post closure

Change request 1

Notable system permissions

- Actor must have COMPANY role
- Must be authenticated and own the job post
- Cannot delete job posts already closed or archived.

Change request 1

Mockup Screens

- My Job Posts Table/ list
- Edit Job Post Form
- Delete Confirmation Modal

• Notifications panel (for post status updates)
<i>Change request 1</i>

Use case code	JOB UC 11.1
Test case	EditDeleteJobPostTestCase_01
Scenario/Description	
A company edits the application deadline of an existing job post and later deletes the post after deciding not to hire.	
Test Data 1	
• Company: Nexus Analytics • Job Title: Data Analyst Trainee • New Deadline: 15 August 2025 • Action: Edit → then Delete	
Expected behavior	
• Job post updates are saved correctly • Job post is later deleted after confirmation • All linked systems (e.g. chat, applications) are updated accordingly	
Actual behavior	
Status	
Draft	
Comments	
• Allow soft-deletion with restore option – FUTURE • Track edit history – FUTURE • Notify followers/ applicants to job post when changes are made	

Code	JOB_UC_12.0
Use case	Manage Job Applicants
Actor	Registered Company
Goal	To allow a company to view, accept, or reject Jobseekers who have applied to a specific job post. Only accepted applicants are added to the job-specific chat area (if it was created).
Description	
This use case enables companies to manage applicants to their job posts. After reviewing applicants, the company can: • Accept candidates (automatically adds them to the job-specific chat area, if any- PREMIUM) • Reject candidates (updates status and sends a rejection note to the applicant). • View full profile, CV, and any custom resume attached. This use case helps streamline applicant handling and communication.	
<i>Change request 1</i>	
Validation Rules	
• Company can only manage applicants for job posts it owns. • Only verified applicants (properly submitted and not withdrawn) can be acted upon. • Applicant cannot be both accepted and rejected. • System prevents duplicate acceptances or rejections. • If job-specific chat exists (PREMIUM), only accepted applicants are added to it.	
<i>Change Request 1</i>	
Steps	
1. Company logs in and navigates to “My Job Posts” 2. Selects a job post → clicks “Manage Applicants” 3. System displays a list of applicants with: • Name, summary, status (Pending/Accepted/ Rejected)	

- Resume preview link
4. Company clicks on an applicant to view full details
 5. From the details page, company selects one of the following actions:
 - Accepted application → applicant status is updated, and they are:
 - Added to the job-specific chat area (if enabled)
 - Notified of acceptance
 - Reject Application → applicant status is updated, and they are:
 - Sent a rejection note/ message
 - Not added to the job-specific chat area (if enabled)
 6. The system logs the decision and updates the dashboard view.

Change request 1

Notable system permissions

- Actor must have COMPANY role
- Must be authenticated and own the job post

Change request 1

Mockup Screens

- Applicant list with filters (Status, name, date applied)
- Applicant detail view with Accept/ Reject buttons
- Status indicator and chat participation icon
- Confirmation modal for actions.

Change request 1

Use case code	<u>JOB UC 12.0</u>
Test case	ManageApplicantsTestCase_01
Scenario/Description	

A company reviews applications to a job, accepts one applicant, and rejects another. Accepted applicant(s) is/are added to the job-specific chat area (if enabled). Rejected applicant(s) is/are sent a rejection note.

Test Data 1

- Company: Iona Tech Services
- Job post: UI/UX Intern
- Applicants:
 - Grace M. → Accepted
 - John K. → Rejected
- Chat area: Enabled for this job

Expected behavior

- Grace's status changes to Accepted and she's added to the chat area
- John's status changes to Rejected.
- Grace receives notification and gains access to the chat
- John receives rejection note and is not added to chat.

Actual behavior

Status

Draft

Comments

- **Allow bulk actions (accept multiple) – FUTURE**
- **Consider adding interview scheduling from this view as one of the actions.**

Code	JOB_UC_13.0
Use case	Participate in Job-Specific Chat Area
Actor	Accepted Jobseeker (for a specific job post)
Goal	To allow an accepted Jobseeker to participate in a dedicated chat space related to a job post they applied for and were accepted into.

Description
This use case describes how a Jobseeker who was accepted for a job post can access and engage in a job-specific chat room created by the company. The chat area serves as a communication channel for: • Instructions from the employer • Questions and clarifications by candidates • Scheduling interviews or onboarding steps Participation is exclusive to accepted applicants and a company's hiring team.
<i>Change request 1</i>
Validation Rules
• Jobseeker must be in <i>Accepted</i> status for that job post • A chat room must have been created for the job (PREMIUM) • Only members of the specific job chat can send and receive messages in that room. • Messages may include text, attachments, or links (limited by platform settings).
<i>Change Request 1</i>
Steps
7. Jobseeker logs into their dashboard 8. Navigates to My Applications 9. For any job with status "Accepted" and chat enabled, a "Join Chat" button is visible. 10. Jobseeker clicks the button → system redirects to the chat interface 11. In the chat area, Jobseeker can: • View ongoing discussion • Post new messages • Receive messages from company reps 12. System stores messages and sends optional notifications 13. Jobseeker can return to this chat anytime from their dashboard.
<i>Change request 1</i>
Notable system permissions
• Actor must have role: JOB_SEEKER

• Must be accepted to a job with an active chat room • System must maintain chat permissions (no access for rejected, pending, or non-applicants) • Messages are retained and time-stamped.
<i>Change request 1</i>
Mockup Screens
• Job Applications Page with “Join Chat” button • Chat room interface (header: Job Title, messages, input box, send button) • Read receipts (optional) • Mobile-friendly layout
<i>Change request 1</i>

Use case code	<u>JOB_UC_13.0</u>
Test case	ParticipateInJobChatTestCase_01
Scenario/Description	
A Jobseeker accepted into a job post joins the job-specific chat and sends a message to the company.	
Test Data 1	
• Jobseeker: Harriet T. • Company: Zepto Innovations • Job Post: Content Writing Intern • Chat area: Enabled • Action: Send message “Thank you for accepting me!”	
Expected behavior	
• Harriet successfully enters the chat room • Message is posted and appears in the conversation thread • Company can view and reply to the message. • Chat persists and is accessible on future logins.	

Actual behavior
Status
Draft
Comments
• Allow file sharing, emojis, and threaded replies – FUTURE • Log chat history for audit if needed • Option to mute or leave chat • Optionally, select who sees message – PREMIUM.

Code	JOB_UC_14.0
Use case	Take Action on Jobseeker Profile
Actor	Registered Company
Goal	To allow a registered company to take meaningful actions on a Jobseeker's profile such as: 1. Add Jobseeker to a job-specific chat area (if previously created) – PREMIUM 2. Add Jobseeker to a VI (Virtual Internship) chat area – PREMIUM 3. Share a specific job post link directly with the Jobseeker - PREMIUM
Description	
This use case enables a company user to navigate through the Jobseeker directory, view individual profiles, and take direct engagement actions: • If the company finds a suitable candidate, they can add them to an existing chat group (either job-specific or general VI) • The company can also share a relevant job post to that Jobseeker's inbox or notification panel. These actions aim to enhance talent targeting and outreach efficiency.	
Change request 1	

Validation Rules
• Company can only perform actions on public or subscribed Jobseeker profiles • Job-specific chat must exist to allow adding a Jobseeker to it. • A Jobseeker must not already be a member of the selected chat area • Shared job posts must be active and belong to the same company.
<i>Change Request 1</i>
Steps
1. Company logs into dashboard → navigates to “Jobseeker Directory” 2. Filters/searches for Jobseekers by names, skills, experience levels 3. Clicks to view a specific PUBLIC Jobseeker profile 4. From the profile actions, selects one of the following: • “Add to Job Chat” → system lists available job-specific chat areas for the company. Company selects one and confirms. Jobseeker is added. • “Add to VI Chat” → system adds the Jobseeker to the company’s VI chat area • “Share Job Post” → system shows a list of active job posts for the company. Company selects one. A notification with job link is sent to the Jobseeker. 5. System validates each action and confirms success.
<i>Change request 1</i>
Notable system permissions
• Actor must have role: COMPANY • Must have permission to manage chat areas and job posts • Can only act on PUBLIC Jobseeker profiles
<i>Change request 1</i>
Mockup Screens
• Jobseeker profile page with action buttons: ○ Add to Job Chat ○ Add to VI Chat ○ Share Job Post

• Modal for selecting job posts or chat room • Confirmation alert after each action.
<i>Change request 1</i>

Use case code	JOB UC 14.0
Test case	CompanyActionOnJobseekerProfileTestCase_01
Scenario/Description	
A company finds a suitable candidate and shares a job post, then adds the candidate to the VI chat area.	
Test Data 1	
• Company: Skynetics Ltd. • Jobseeker: Aisha Namwanje • Job Post: UI/UX Designer Intern • Actions Taken: ○ Share Job post ○ Add to VI chat	
Expected behavior	
• Aisha receives a notification about the shared job post. • Aisha is successfully added to the VI chat area. • Company sees a confirmation for both actions.	
Actual behavior	
Status	
Draft	
Comments	
• Limiting daily invites/ actions • Showing history/ log of actions taken on each Jobseeker – FUTURE	

SUGGESTED WORKFLOW FOR A FAST MVP (Minimum Viable Product)

✓ Phase 1: Core Authentication & Onboarding

Essential

1. JOB_UC_01.0 – Register Jobseeker Account
2. JOB_UC_01.1 – Register Company Account
3. JOB_UC_02.0 – User Login

These enable access to the platform and establish user identity.

✓ Phase 2: Dashboards & Profile Setup

Essential

4. JOB_UC_03.0 – Jobseeker Dashboard Actions
5. JOB_UC_04.0 – Company Dashboard Actions
6. JOB_UC_05.0 – Create/Update Jobseeker Profile
7. JOB_UC_05.1 – Create/Update Company Profile

These give users the ability to set up and manage their presence.

✓ Phase 3: Job Exploration and Posting

Essential

8. JOB_UC_06.0 – View Companies (*Jobseeker side*)
9. JOB_UC_08.0 – View Job Posts (*Jobseeker side*)
10. JOB_UC_11.0 – Create Job Post (*Company side*)
11. JOB_UC_11.1 – Edit/Delete Job Post (*Optional but useful*)

These power the job marketplace itself — browsing and posting.

✓ Phase 4: Application Flow

Essential

12. JOB_UC_08.1 – Apply to Job Post (*with resume upload or creation*)
13. JOB_UC_12.0 – Manage Job Applicants (*Company side – accept/reject*)

These close the loop between jobseeker and employer actions.

✓ Phase 5: Subscription & Matching (Optional)

Optional but useful if time permits:

14. JOB_UC_07.0 – Subscribe or Apply to a Company (*Employable or VI*)
 15. JOB_UC_10.0 – View Jobseekers' Profiles (*Company side*)
 16. JOB_UC_10.1 – Respond to Company Invitation (*Jobseeker side*)
-

✗ Phase 6: Premium or Future Features (Post-MVP)

Exclude from MVP unless scope allows:

- JOB_UC_09.0 – Track Job Application (*Premium*)
- JOB_UC_13.0 – Participate in Job-Specific Chat (*Premium*)

- **JOB_UC_14.0** – Take Action on Jobseeker Profile (*Premium Outreach*)
 - **Chat Area Management, Analytics, Notification Preferences**, etc - *future*.
-
